

Drive Forward Webinar Series - Are You Prepared for the Impact of PoE++ on Your Network?

Enhance your expertise in Information and Communications Technology (ICT) and industrial applications with Chatsworth Products' (CPI) Drive Forward Webinar Series.

By attending the webinars of your choice, you'll be able to participate in relevant discussions impacting today's ICT and industrial infrastructure industries, including the right path to efficient data center management, how to design a reliable networking infrastructure and what to consider when storing equipment at the edge of the network or in harsh environments, among other topics. Recorded sessions will also be available.

Are You Prepared for the Impact of PoE++ on Your Network?

July 19, 2018; 10 a.m. CST; 4 p.m. BST

As Power over Ethernet (PoE) continues to grow, so does the demand for applications with increased power. To address this, an amendment to the Ethernet standard IEEE 802.3bt was recently published in draft form. Complying with the new standard will require not just an upgrade of the network switch, but possibly an upgrade of your network cabling.

Attend this webinar to learn about:

How to better prepare for the impact of PoE++ on your network

Considerations for selecting the appropriate cable management strategy to reduce heat buildup in existing cables

Novel cable management technologies that facilitate and help you do your job more effectively

Cable management accessories that allow for easy installation and protection of cables, even in harsh environments
